Appendix A

SWMU Status Table

Corrective/ Remedial Action Release Unit #	Corrective/Remedial Action Unit Description	RRS Closure	Closure Date	ICM/ Remedial Action	Institutional Control Required	LTM Groundwater Required?	Inspection/ Maintenance Required?
AOC 4	Asbestos Installation (Plant-wide)	Admin Closure	2003	N	N	N	N
AOC 9	Site-Wide, Underground Storage Tanks	Admin Closure	2003	N	N	N	N
SWMU 100	Waste Accumulation Area, (Bldg 12-42)	Admin Closure	2003	N	N	N	N
SWMU 101	Waste Accumulation Area, Bldg 12-59	Admin Closure	2003	D&D	N	N	N
SWMU 102	Bldg 12-68 Batch Master, Northeast Corner	Admin Closure	1997, 2003	N	N	N	N
SWMU 104	Waste Accumulation Area, (Bldg 12-82)	Admin Closure	2003	N	N	N	N
SWMU 105	Waste Accumulation Area, (Bldg 12-84)	Admin Closure	2003	N	N	N	N
SWMU 107	Bldg 16-5, Flammable Liquid Storage	Admin Closure	2003	N	N	N	N
SWMU 111	Bldg 11-36 Solvent Tanks	Admin Closure	2001	N	N	N	N
SWMU 112	Bldg 11-36 Solvent Tanks	Admin Closure	2001	N	N	N	N
SWMU 114	Bldg 11-36 Scrubber System	Admin Closure	2001	D&D	N	N	N
SWMU 115	Bldg 11-36 Carbon Filter	Admin Closure	2001	D&D	N	N	N
SWMU 116	Bldg 11-36 Sludge Filters	Admin Closure	2001	D&D	N	N	N

Corrective/ Remedial Action Release Unit #	Corrective/Remedial Action Unit Description	RRS Closure	Closure Date	ICM/ Remedial Action	Institutional Control Required	LTM Groundwater Required?	Inspection/ Maintenance Required?
SWMU 124	Bldg 11-50 Waste water Treatment System	Admin Closure	2001	N	N	N	N
SWMU 125	Bldg 12-43 HE Contaminated Charcoal Boxes	Admin Closure	2001	N	N	N	N
SWMU 126	Miscellaneous HE Contaminated Waste Dumpsters	Admin Closure	2001	N	N	N	N
SWMU 127	Miscellaneous Non-hazardous Waste Dumpsters	Admin Closure	2001	N	N	N	N
SWMU 128	Portable HE Waste water Tanks	Admin Closure	2001	N	N	N	N
SWMU 129a	HE Contaminated Sludge Containers, Bldg 11-44	Admin Closure	2001	N	N	N	N
SWMU 129b	HE Contaminated Sludge Containers Bldg 12-43	Admin Closure	2001	N	N	N	N
SWMU 131	Portable Waste Oil Storage Tanks (Bldg 12-35)	Admin Closure	2001	N	N	N	N
SWMU 132	Vacuum Guzzlers	Admin Closure	2001	N	N	N	N
SWMU 134	Bldg 11-29 Silver Recovery	Admin Closure	2001	N	N	N	N
SWMU 137	Bldg 12-41, Paint Shop Waste water Tank	Admin Closure	2003	N	N	N	N
SWMU 138	Zone 12 Paint Shop Sandblaster Collection Cone	Admin Closure	2001	N	N	N	N

Corrective/ Remedial Action Release Unit #	Corrective/Remedial Action Unit Description	RRS Closure	Closure Date	ICM/ Remedial Action	Institutional Control Required	LTM Groundwater Required?	Inspection/ Maintenance Required?
SWMU 141	Classified Waste Incinerator	Admin Closure	2001	N	N	N	N
SWMU 142	Miscellaneous Hood and Filter Systems, 24 Bldgs	Admin Closure	2001	N	N	N	N
SWMU 59	Landfill East of Pad 11-13 (Duplicate of SVS 5)	Admin Closure	2003	N	N	N	N
SWMU 62	Landfill 11	Admin Closure	2004	N	N	N	N
SWMU 65	Landfill 14 (Duplicate of SVS 6)	Admin Closure	2003	N	N	N	N
SWMU 76	Firing Site 18	Admin Closure	2001	N	N	N	N
SWMU 77	Firing Site 23, Filter/Exhaust System	Admin Closure	9/19/2001	N	N	N	N
SWMU 83	Bldg 4-8, Container Storage Bldg, Asbestos Staging Area	Admin Closure	2001	N	N	N	N
SWMU 85	MOCA Waste Accumulation Area, Bldg 12-16	Admin Closure	2001	N	N	N	N
SWMU 88	11-41 Compressor Bldg Waste Accumulation	Admin Closure	2003	N	N	N	N
SWMU 89	Waste Accumulation Area, Bldg 12-2 North Hall	Admin Closure	2003	N	N	N	N
SWMU 90	Waste Accumulation Area, Bldg 12-9	Admin Closure	2003	N	N	N	N

Corrective/ Remedial Action Release Unit #	Corrective/Remedial Action Unit Description	RRS Closure	Closure Date	ICM/ Remedial Action	Institutional Control Required	LTM Groundwater Required?	Inspection/ Maintenance Required?
SWMU 91	Waste Accumulation Area, Bldg 12-9 Solvent Storage Shed	Admin Closure	2003	N	N	N	N

*SWMUs 14-27 at the Burning Ground consist of old burn pads that were carried through investigation and cleanup. Also included with those burn pads is an ash disposal trench that resulted from the disposal of ash from the burn pads. The final remedy for SWMUs 14-27 was a soil cover over the trench that must be inspected and maintained as necessary.

Administrative Closure – These sites were identified as potential release sites as part of the RCRA Facility Assessment. No evidence of release could be found upon further investigation, so these sites were not considered as a solid waste management unit and were closed.

RRS 1 – The sites were investigated and determined that all wastes and media were within background concentrations or below the PQL. These sites were closed with no further controls required.

RRS 2 – All wastes and contaminated media were remediated to health-based cleanup levels. Additionally, an ecological risk evaluation determined these sites posed no risk to the environment. These sites do not require post-closure care; however, deed recordation of the contaminated area was completed and the sites were restricted to industrial use.

RRS 3 - These sites required a human health and ecological risk assessment to determine the areas that required remedial action. All sites required deed recordation of the contamination, restriction of property use to industrial, and appropriate institutional controls to prevent contaminated groundwater usage and cross-contamination from perched groundwater to the drinking water aquifer. Some of these sites also require post-closure care such as maintenance of soil covers, fencing, and ditch liners.

Active – These sites are still in use for their intended purpose. These sites will undergo a full investigation and cleanup process once the site is no longer used by Pantex.

This page intentionally left blank.

Appendix B

Extraction Well Flow Data

B. Extraction Well Flow Calculations

The flows included here have been calculated from information obtained from each pump and treat system at Pantex.

The P1PTS data acquisition system recorded hourly flow rates and well operation time. This was used to calculate the total flow from each well by month. The system also records total influent flow rates and total volume each day. 2021 SEPTS flow data was recorded in the I-Historian software and average hourly flow rates were downloaded from the I-Historian database. The total flow discussed in Section 2 is based on the influent flow volume which is easily calibrated and closely tracked. Because flow rates and operational status of the well is recorded hourly rather than each minute, there will be some inconsistencies between the total calculated flow from the wells vs. the influent flow into the system. These well flow calculations provide a basis for understanding the flow rate for each well, the amount of downtime, and allows for tracking of pumping rates for the wells. Changes in these rates can trigger maintenance at the wells.

B.1. P1PTS Flow Volumes

The P1PTS system was in its thirteenth full year of operation. The system only operated one week per quarter to allow the SEPTS to be fully operated.

Table B-11 presents the downtime contributors. Pumping was primarily affected by shutdown to allow SEPTS to operate fully, loss of paging system, and COVID-19 shutdown. The loss of paging system required the system to only operate during the day when workers were present. When the system was operating, flow was restricted due to the loss of the irrigation system, which required water to be released to Playa 1. Flow to Playa 1 is restricted by permit.

Table B-1. P1PTS Well Downtime Contributors

Month	Operational Contributor	Well Contributions
January	Irrigation System/Playa 1 restrictions, SEPTS operation	EW-70
February	Irrigation System/Playa 1 restrictions, SEPTS operation	EW-70
March	Paging issues, only operated 1 week, 8 hr/day	EW-70
April	Irrigation System/Playa 1 restrictions, SEPTS operation	EW-70
May	Irrigation System/Playa 1 restrictions, SEPTS operation	EW-70
June	Paging issues, only operated one week, 9 hr/day	EW-81 EW-70
July	Irrigation System/Playa 1 restrictions, SEPTS operation	EW-81 EW-70
August	Irrigation System/Playa 1 restrictions, SEPTS operation	EW-81 EW-70

Month	Operational Contributor	Well Contributions
September	Paging issues, only operated one week, 9 hr/day	EW-81 EW-70
October	Irrigation System/Playa 1 restrictions, SEPTS operation	EW-81 EW-70
November	Irrigation System/Playa 1 restrictions, SEPTS operation	None
December	SEPTS operation, paging issues, only operated one week, 8 hr/day	None

B.2. SEPTS Flow Volumes

The SEPTS has been operating since 1995 when it started as a treatability study. It has been expanded to become a corrective action for the southeastern portion of the perched groundwater plumes.

Operation of the system was affected by carbon change-outs, weather issues, communication issues, paging issues, and power outages. Well operation time has also been impacted by various electrical, pump, and control problems, and the prioritization of pumping from the well field. As discussed in Section 2, the SEPTS, as designed, can treat up to 300 gpm, although the system can exceed 300 gpm at times. Since the system well field capacity exceeds 300 gpm, pumping priorities were established for extraction well operation (see Figure 2-9 in Section 2). Due to decline in water levels, future pumping is expected to be impacted and pumping prioritization will no longer be required.

Table B-2 provides a summary of well downtime contributions by month. SEPTS operated consistently through the year due to the shutdown of P1PTS. During 2021, well downtime impacted flow. PTX06-EW-10 and PTX06-EW-51 were shut down in 2021 due to the increasing concentrations of perchlorate observed at the wells. These wells are shut down until a perchlorate pre-treatment system is designed and installed. The new wells east of FM 2373, PTX06-EW-86 through PTX06-EW-88, were down variably. Water levels at PTX06-EW-83 through PTX06-EW-85 have declined to the point they can no longer be operated. Several high priority wells are not operating due to low water levels. Several wells required repair during 2021. To address the continued issues, a new electrical contract was started during 2021, allowing for quicker response to well repair. Nine wells were repaired by the end of 2021.

Injection was started in July 2017 after the break at the filter bank and continues to provide an outlet for a portion of the SEPTS flow. Repairs were made to the filter bank, but repairs were then required to the subsurface system, with communication issues arising that also required repair. All issues were addressed in early 2022 and limited operation of the system began. However, the WWTF ponds require maintenance in 2022 and are expected to impact operation of the subsurface irrigation system, as storage capacity will be limited during the maintenance period. The pivot

irrigation system started construction in December 2021 and is expected to be commissioned for use in late 2022. Injection is expected to be part of the operation strategy for SEPTS until the pivot irrigation system is operational in late 2022.

Table B-2. SEPTS Well Downtime Contributors

Month	Operational Contributor	Well Contributions
Jan	GAC exchange	EW-20, EW-22, EW-53, EW-54, EW-57, EW-65, EW-70, Perchlorate Wells
Feb	Weather	EW-20, EW-22, EW-53, EW-54, EW-57, EW-65, EW-70, Perchlorate Wells
Mar	GAC exchange	EW-20, EW-22, EW-53, EW-54, EW-57, EW-65, EW-70, Perchlorate Wells
Apr	Paging Issues	EW-20, EW-22, EW-53, EW-54, EW-57, EW-65, EW-70, Perchlorate Wells
May	Paging and alarm issues, primarily paging	EW-20, EW-22, EW-53, EW-54, EW-57, EW-65, EW-70, Perchlorate Wells
Jun	Communication Failures	EW-15, EW-20, EW-22, EW-53, EW-54, EW-57, EW-65, EW-70, Perchlorate Wells
Jul	Power Failure	EW-15, EW-20, EW-22, EW-53, EW-54, EW-57, EW-65, EW-66, EW-70, Perchlorate Wells
Aug	None	EW-12, EW-15, EW-20, EW-22, EW-53, EW-54, EW-57, EW-65, EW-66, EW-70, Perchlorate Wells
Sep	None	EW-12, EW-15, EW-20, EW-22, EW-53, EW-54, EW-57, EW-65, EW-66, EW-70, EW-65, EW-66, EW-70, Perchlorate Wells
Oct	GAC exchange	EW-12, EW-15, EW-20, EW-22, EW-53, EW-54, EW-57, EW-65, EW-66, EW-70, EW-65, EW-66, EW-70, Perchlorate Wells
Nov	None	EW-12, EW-15, EW-53, EW-54, EW-57, EW-66, Perchlorate Wells
Dec	None	EW-53, Perchlorate Wells

Perchlorate wells include PTX06-EW-10 and PTX06-EW-51

Appendix C

Well Information

Table C-1. Well Maintenance Table

Location	Work Date	Activity	Water Level Measurement (ft btoc)	Total Depth Measurement (ft btoc)	Tubing bundle length (ft)	Drop tube length (ft)	Intake Depth	Comments
PTX06-1062A	1/13/2021	(1) Bennett pump service	516.00	873				The seismic project is complete with the wells. Installed dedicated tubing bundle and Bennett pump in well. Pumped 3 gallons of water from the well. Pumping good.
PTX06-1157	1/13/2021	(1) Bennett pump service	399.50	527				The seismic project is complete with the wells. Installed dedicated tubing bundle and Bennett pump with drop tube and lower diverter attached in well. Pumped 3 gallons of water from the well. Pumping good.
PTX06-1141	1/13/2021		486.20	678				The seismic project is complete with the wells. Installed dedicated tubing bundle and Bennett pump with lower diverter attached in well. Pumped 3 gallons of water from the well. Pumping good.

Location	Work Date	Activity	Water Level Measurement (ft btoc)	Total Depth Measurement (ft btoc)	Tubing bundle length (ft)	Drop tube length (ft)	Intake Depth	Comments
PTX06-1074	2/5/2021	(1) Well video	429.70	625				Performed well inspection video focusing on 74' and 325' below top of casing. 4" stainless steel casing and screen. Observed the following: yellow staining at 55' with corrosion and pitting in the casing seam, 59' yellow staining with severe pitting in middle of the stain, there are several more spots with similar staining throughout the casing, 74'-75' no indication of compromised casing, 204.5' possible grout in casing joint. The leak in the casing joint at 324' has deteriorated significantly since the 2016 video was made. Extreme calcification buildup at joint and extends well below the casing joint. Calcification buildup below 400' but unable to determine the origin. Observed mud and sand packed in the screen above water. The screen is relatively clean below top of water. The water was cloudy. Sand and debris buildup has filled up the sump into the screen. No indication how far the buildup is in the screen. Several zip ties from the tubing bundle on top of sand buildup.
PTX06-PZ01	3/29/2021	(1) Other-explained below	260.30	276				Performed well inspection per well maintenance plan. This well has 2" pvc casing therefore no well video was performed for this inspection.
PTX06-EW-3	3/31/2021	(1) Extraction well service						Verified LOTO status of this well and placed LOTO locks on lock box. Conducted location checks. Rigged up and pulled 13 joints of 1 1/4" X 20' pvc tubing, 1 - 1 1/4" X 16' sub, 1 - 1 1/4" X 2 1/2' sub and submersible pump. Work is being performed per WMR and well maintenance plan. P&T techs assisting.

Location	Work Date	Activity	Water Level Measurement (ft btoc)	Total Depth Measurement (ft btoc)	Tubing bundle length (ft)	Drop tube length (ft)	Intake Depth	Comments
PTX06-EW-60	3/31/2021	(1) Extraction well service						Verified LOTO status of this well and placed LOTO locks on lock box.Conducted tailgate safety briefing and daily rig/location checks. Rigged up and pulled 13 joints of 1 1/4" X 20' pvc tubing, 1 1 1/4" X 7' sub and submersible pump. Work is being performed per WMR and well maintenance plan. P&T techs assisting.
PTX06-EW-3	4/5/2021	(1) Well video	272.40	284				Performed well video per WMP inspection schedule. This well has 6" stainless steel casing and screen. The casing and screen are in good condition, the screen is clean. The sump is clean with a light amount of sand on bottom.
PTX06-EW-60	4/5/2021	(1) Well video	274.70	293				Performed well video per WMP inspection schedule. This well has 6" pvc casing and stainless steel screen. The casing is in good condition. The screen has moderate to heavy iron bacteria and sand buildup. This well has no sump.
PTX06-1158	4/19/2021	(1) Well video		285				Performed well inspection video per WMP. Well has 4" pvc casing and screened section. The casing and screen are in good condition. The sump is clean. Observed approximately 4" of water in the sump.
PTX06-ISB411	4/19/2021	(1) Well video	280.70	290				Performed well video per WMR to inspect the plug installed in the sump. This well has 4" stainless steel casing and screened section. The casing and screen are in good condition. The plug is visible in bottom of the sump. There appears to be gaps between the plug and walls of the sump, however it is unknown what the bottom of the plug is.

Location	Work Date	Activity	Water Level Measurement (ft btoc)	Total Depth Measurement (ft btoc)	Tubing bundle length (ft)	Drop tube length (ft)	Intake Depth	Comments
PTX06-EW-60	4/21/2021	(1) Re-development						Conducted tailgate safety briefing and daily rig/location checks. Surged/brushed screened section then bailing brown colored water with moderate amounts of sand. Water cleaned up after bailing 60 gallons.
PTX06-EW-60	4/22/2021	(1) Re-development						Conducted tailgate safety briefing and daily rig/location checks. Surged/brushed well and bailing. Water cleans up quickly after surging.
PTX06-EW-3	4/26/2021	(1) Extraction well service						Conducted location checks. Installed submersible pump and 1 1/4" pvc tubing. P&T techs assisting.
PTX06-EW-60	4/26/2021	(1) Extraction well service						Conducted tailgate safety briefing and daily rig/location checks. Installed submersible pump and 1 1/4" pvc tubing. P&T techs assisting.
PTX06-1168	4/27/2021	(1) Well video	278.30	287				Performed well inspection video per WMP schedule. This well was previously PTX06-EW47 and still has the metal box installed around the well. This well has 6" pvc casing and 6" stainless steel screen. The casing is in good condition. Observed possible small holes in screen at 270.4' btoc and 283.4' btoc. Observed light amounts of iron bacteria throughout the screened section. The sump appears to be two-thirds full of sand.
PTX06-1069	4/28/2021	(1) Bennett pump service (2) Well video	253.30	260				Well inspection per wmp schedule. Pulled dedicated tubing bundle and Bennett pump with drop tube attached.Tubing bundle is old 1/2" tubing and pump are in good condition. Performed well video 4" PVC casing and screen in good condition . Observed unkown material in the sump .Installed tubing bundle, Bennett pump and drop tube. Pumped 3 gallons of water from well. Pumping good.

Location	Work Date	Activity	Water Level Measurement (ft btoc)	Total Depth Measurement (ft btoc)	Tubing bundle length (ft)	Drop tube length (ft)	Intake Depth	Comments
PTX08-1002	4/30/2021	(1) Well video (2) Bennett pump service	219.10	263				well inspection per wmp schedule. Pulled dedicated tubing bundle Bennett pump and drop tube. Performed well video. Well has 4"PVC casing and screen casing is in good condition. Top of water is above top of screen. Observed severe sand infiltration in the middle of the screened section the sump is clean with light debris on bottom
PTX06-1023	4/30/2021	(1) Well video (2) Bennett pump service	246.90	258				well inspection per wmp schedule pull dedicated tubing bundle bennett pump and drop tube. Performed well video. Well has 4"stainless steel casing and screen . Casing is in good condition screen has iron bacteria damage with no major iron bacteria build up observed the sump is clean. Installed tubing bundle,Bennett pump and drop tube. Pumped 3gallons of water and pumped good
PTX01-1001	5/3/2021	(1) Bennett pump service (2) Re-development	285.30	301				Pulled dedicated tubing bundle, Bennett pump and 8' drop tube in prep for well redevelopment. The pump had rust on it, observed light pitting around the pump valve body. Will replace the pump when the tubing bundle is installed after redevelopment. Conducted tailgate safety briefing and daily rig/location checks. Rigged up and began surging/brushing the screened section and bailing. The water after surging is light brown in color but clears up quickly when bailing.
PTX01-1001	5/5/2021	(1) Re-development						Conduct tailgate safty briefing plus rig location check list. Continued surging/brushing and bailing until water column was cleaned up

Location	Work Date	Activity	Water Level Measurement (ft btoc)	Total Depth Measurement (ft btoc)	Tubing bundle length (ft)	Drop tube length (ft)	Intake Depth	Comments
PTX01-1001	5/12/2021	(1) Well video (2) Bennett pump service	285.30	301				Performed post redevelopment inspection video. Well has 4" stainless steel casing and screen. The casing and screen clean and in good condition. The sump is clean. Installed dedicated tubing bundle, Bennett pump and drop tube. The previously installed pump had minor pitting and rust. Replaced with a rebuilt Bennett pump. Pumped 3 gallons of water from the well, pumping good.
PTX06-1143	5/24/2021	(1) Bennett pump service	503.00	780				Well maintenance support for 5 year multi-level sampling. Pulled dedicated tubing bundle, Bennett pump and lower diverter. Installed the portable Bennett tubing bundle with multi-level diverters to level 2. The pump intake is set at 542' btoc. The top diverter is set at 530' and lower diverter set at 577' btoc. Purged 2.5 gallons to purge tubing. After level 2 sampled, pulled tubing bundle with pump and diverters. Changed out lower diverter cable (45' to 75' length). Installed pump and diverters to level 3. The pump intake set at 597'. Upper diverter set at 585', lower diverter set at 662'. Purged 2.5 gallons to purge tubing. After level 3 sampled, pulled portable tubing, pump and diverters out of well, changed out lower diverter cable (75' to 65' length). Installed portable tubing, pump and diverters to level 4. Pump intake set at 697'. Top diverter set at 685', lower diverter set at 752'.

Location	Work Date	Activity	Water Level Measurement (ft btoc)	Total Depth Measurement (ft btoc)	Tubing bundle length (ft)	Drop tube length (ft)	Intake Depth	Comments
PTX06-1141	5/25/2021	(1) Bennett pump service	486.30	678				Well maintenance support for 5 year multi level sampling. Pulled the dedicated tubing bundle, Bennett pump and lower diverter out of the well. Installed portable tubing bundle and multi level sampling equipment to level 2. Pump intake is set at 532', top diverter set at 520', lower diverter set at 567'.
PTX06-1143	5/25/2021	(1) Bennett pump service	503.00	480				Well maintenance support for 5 year multi level sampling. After level 4 sampled, pulled the portable tubing bundle, Bennett pump and multi level diverters from the well. Due to water aeration issues, removed pump # 1806-482 from the portable tubing bundle and installed pump # 1806-480. Removed lower diverter and installed portable tubing bundle and multi level sampling equipment to level 5. Pump intake set at 765'. The original intake setting of 772' was not used due to sand infiltration issues per M. Jarrett. Top diverter set at 753'. After level 5 sampled, pulled portable tubing bundle with multi level equipment out of well and installed the dedicated tubing bundle, Bennett pump and lower diverter. Pumped 3 gallons of water from the well. Pumping good.
PTX06-1138	5/26/2021	(1) Bennett pump service	471.90	589				Well maintenance support for 5 year multi level sampling. Pulled dedicated tubing bundle, Bennett pump with drop tube attached and lower diverter. Installed portable tubing bundle with multi level equipment to level 2. The pump intake set at 507'. Top diverter set at 495'. No lower diverter was installed.

PTX06-1141	5/26/2021	(1) Bennett pump service	486.30	678				WM support for 5 year multi level sampling. After level 2 sampled, lowered the multi level sampling equipment to level 3. Pump intake set at 587'. Top diverter set at 575'. A lower diverter not necessary on level 3. The lower diverter from level 2 was not removed due to ample room between the diverter and the well TD. After level 3 sampled, pulled the portable tubing bundle with multi level equipment out of the well. Installed the dedicated tubing bundle, Bennett pump and lower diverter. Pumped 3 gallons of water from the well. Pumping good.
PTX06-1140	6/7/2021	(1) Bennett pump service	498.00	682				Well maintenance support for 5 year multi-level sampling. Pulled dedicated tubing bundle and Bennett pump with lower diverter. Installed portable tubing bundle with multi-level equipment to level 3. Sample intake set at 572'. Top diverter set at 560' and lower diverter set at 627'. After level 3 was sampled, pulled multi-level equipment out and removed lower diverter. Installed multi-level equipment to level 4. Sample intake set at 647', top diverter set at 635'.
PTX06-1138	6/7/2021	(1) Bennett pump service	471.90	589				Well maintenance support for 5 year multi-level sampling. After level 2 was sampled, pulled portable tubing bundle with multi-level equipment. Installed dedicated tubing bundle, Bennett pump with drop tube attached and lower diverter. Pumped 2.5 gallons of DI water to purge portable tubing bundle.

PTX06-1140	6/8/2021	(1) Bennett pump service	498.00	682				Well Maintenance support for 5 year multi-level sampling. After level 4 was sampled, pulled multi-level equipment and installed the dedicated tubing bundle, Bennett pump and lower diverter. Pumped 3 gallons from the well. Pumping good. Purged 2.5 gallons of DI water through portable tubing bundle to purge bundle.
PTX06-1157	6/8/2021	(1) Bennett pump service	398.90	527				Well maintenance support for 5 year multi-level sampling. Pulled dedicated tubing bundle, Bennett pump with drop tube attached and lower diverter. Installed multi-level equipment to level 2. Sample intake set at 467', top diverter set at 455', lower diverter set at 502'. After level 2 sampled, pulled multi-level equipment and removed lower diverter. Installed multi-level equipment to level 3. Sample intake set at 517', top diverter set at 505'.
PTX06-1157	6/9/2021	(1) Bennett pump service	398.90	527				Well maintenance support for 5 year multi-level sampling. After level 3 was sampled, pulled the multi-level equipment out of the well. Purged DI water through the portable tubing bundle to decon. Installed dedicated tubing bundle, Bennett pump with drop tube attached and lower diverter in the well. Unable to get the pump to move water. Pulled tubing bundle, pump with drop tube and lower diverter out of the well. Tested pump, the pump has good pump action. Evacuated water out of the tubing bundle. Re-installed the dedicated tubing bundle, Bennett pump with drop tube attached and lower diverter in the well. Pumped 3 gallons of water from the well. Pumping good.

PTX08-1011A	7/8/2021	(1) Bennett pump service						Onsite to pull the dedicated tubing bundle and Bennett pump in prep for well P&A. Pulled the tubing bundle out of the well ~10'. At this point the safety cable that attaches to the Bennett power reel broke at or near the well casing cap on the tubing bundle. The tubing then fell back onto the casing cap on top of the casing. Shut down to advise Clifton Britten.
PTX08-1011A	7/12/2021	(1) Bennett pump service						On location to retrieve stubk dedicated tubing bundle and Bennett pump out of the well. Conducted tailgate safety and rig/location check. Rigged up Hunke on well and positioned the well maintenance at the well. Using a cable sling attached to the tubing bundle, lifter tubing bundle and attached nylon straps to the tubing below the well casing cap. Began pulling tubing bundle with the rig. Pulled the tubing ~10", tubing stuck. Pulled tubing loose and pulled ~100' out with the rig then attached the tubing to the Bennett power reel and completed tubing bundle and Bennett pump removal.

PTX06-EW-20	8/23/2021	(1) Re-development						Conducted tailgate safety briefing and daily rig/location checks. Placed LOTO locks on lock box. Began brushing/bailing. The well has 5" schedule 80 pvc casing. The 5" brushes wouldn't go in the casing. Put cable in surge block to scratch the screen and proceeded with brushing/bailing.
PTX06-EW-20	8/25/2021	(1) Re-development						conducted a tailgate safty meeting and rig inspection check. Put LOTO locks on lock box then begain to brush and bail well cassing is a 5" well cassing is PVC brushes would not work put cable on block to scrub well pulled 200 gal of H 2/O
PTX06-EW-37	8/26/2021	(1) Re-development						Placed LOTO locks on lockbox. Conducted tailgate safety briefing and rig/location checks. Well has 5" schedule 80 pvc casing and stainless steel screen. Brushing and bailing the well.
PTX06-EW-81A	9/1/2021	(1) Re-development						put on LOTO conduct tailgate safty and did a rig location inspection and start to brush and bail well pulled 100-GAL

Location	Work Date	Activity	Water Level Measurement (ft btoc)	Total Depth Measurement (ft btoc)	Tubing bundle length (ft)	Drop tube length (ft)	Intake Depth	Comments
PTX06-EW-20	9/1/2021	(1) Well video						Post redevelopment well video. The casing and screen are in good condition with significantly less iron bacteria and sand deposits observed in the screen. The sump is clean. There is staining visible in the screen due to past iron bacteria deposits. This is a permanent staining condition.
PTX06-EW-37	9/2/2021	(1) Well video						Post redevelopment video. The casing and screen are in good condition and the screen is clean. The sump is clean with a light amount of sand in the bottom. The water is slightly cloudy throughout the water column.
PTX06-EW-81A	9/3/2021	(1) Re-development						Conducted tailgate safety briefing and rig/location checks. LOTO locks placed on LOTO box. Brushing and bailing well. Getting some sand and light brown water after brushing. Bailed until water began cleaning up.
PTX06-EW-81A	9/7/2021	(1) Well video						Performed post redevelopment well video. Well has 6" pvc casing and stainless steel screen. The casing is in good condition. Noted some calcium deposits near top of the screen with extensive staining throughout the screen. Light amounts of iron bacteria in the screen with some sand infiltration near bottom of the screen. The 1' sump is ~2/3 full of sand.
PTX06-EW-70	9/7/2021	(1) Re-development						on site LOTO had safty meeting inspect rig location and check well sight to bail and scrub well pulled a lot of well calcium out and sand and 3"of tape
PTX06-EW-53	9/9/2021	(1) Re-development						had a safty meeting did LOTO and did a sight inspection first bailed pulled sand looked like filter pack put brush on brushed a littel started to bail pulled more sand bailed 50 gals called it good did not want to make it worse till we run a camra to see it

Location	Work Date	Activity	Water Level Measurement (ft btoc)	Total Depth Measurement (ft btoc)	Tubing bundle length (ft)	Drop tube length (ft)	Intake Depth	Comments
PTX06-EW-65	9/9/2021	(1) Re-development						pull up to sight did a sight inspection rig up to bail and brush pulled sand and silt out brushed more pulled out 120 gals
PTX06-EW-53	9/13/2021	(1) Well video						This well was bailed per Maeghan Brundrett to attempt to retrieve tape out of the sump. As techs were bailing, they began to get what appeared to be filter sand out of the well indicating possibly compromised sump. This video confirms that the end cap is busted out of the sump with filter sand visible. A snap shot of the busted end cap was taken during the video process and is copied to the k drive, 2021 well video folder along with the video. Maeghan Brundrett and Michelle Jarrett will be notified of the finding.
PTX06-EW-70	9/13/2021	(1) Well video						Post redevelopment video. The casing and screen are in good condition with mostly staining noted in the screen with very light amount of iron bacteria and scale observed. This well has no sump, only a 6" end cap on bottom of the screen. The end cap is full of sand.
PTX06-EW-65	9/13/2021	(1) Re-development						did LOTO drive to sight do a sight inspection then bail and did some bailing got some light sand and some silt continue to bail and surge
PTX06-EW-65	9/14/2021	(1) Re-development						did LOTO and sight inspection bailed and surge got 30gals out looked good moved to next well
PTX06-EW-22A	9/16/2021	(1) Well video						drive to sight location run camera 6" PVC risser 6" SS screen looked Good

Location	Work Date	Activity	Water Level Measurement (ft btoc)	Total Depth Measurement (ft btoc)	Tubing bundle length (ft)	Drop tube length (ft)	Intake Depth	Comments
PTX06-EW-65	9/16/2021	(1) Well video						LOTO then drive to location and had safty meting did sight inspection rig up run camera well looked really good 6" Riser and 6" SS screen very little sand at the endcap
PTX06-EW-81A	9/20/2021	(1) Extraction well service						Conducted tailgate safety briefing and rig/location checks. Placed LOTO locks on lock box. Drove to location, rigged up and installed 2" pvc tubing and submersible pump. P&T techs assisting.
PTX06-EW-22A	9/21/2021	(1) Extraction well service						Conducted location checks. Rigged up and installed submersible pump and tubing. Also installed new power cable. P&T techs assisting.
PTX06-EW-20	9/21/2021	(1) Extraction well service						LOTO locks placed on LOTO box. Conducted tailgate safety briefing and rig/location checks. Rigged up and installed submersible pump and tubing in the well. Also installed new power cable. P&T techs assisting.
PTX06-EW-37	9/21/2021	(1) Extraction well service						Conducted location checks. Rigged up and installed submersible pump and tubing. P&T techs assisting.
PTX06-1122	9/22/2021	(1) Well video		282				Well inspection video WMP. WELL HAS A 4 PVC CASING AND STAINLESS SCREEN IN GOOD CONDITION. THE SUMP WAS CLEAN AND WELL WAS DRY

Location	Work Date	Activity	Water Level Measurement (ft btoc)	Total Depth Measurement (ft btoc)	Tubing bundle length (ft)	Drop tube length (ft)	Intake Depth	Comments
PTX06-1144	9/27/2021	(1) Bennett pump service	502.50	802				Well maintenance support of GW multi-level sampling. This event is a resample of level 5 VOC. Pulled dedicated tubing bundle and Bennett pump with top and bottom diverters attached. Installed portable tubing bundle with top diverter attached. Set pump intake at 792' below top of casing. Couldn't get water to pump. Pulled pump and found that pump was clogged with fine sand. Changed pump and installed intake at 782' below top of casing to avoid sand. After well was sampled, pulled portable tubing bundle and pump with multi-level equipment and installed dedicated tubing bundle and Bennett pump with top and Bottom diverters attached. Pumped 3 gallons of water from the well. Pumping good.
PTX06-1209	10/4/2021	(1) Well video	263.70	279				Well acceptance video. Well has 4" pvc casing and screen in good condition. Slots in top section of screen appear distorted. Injection is in progress at adjacent well possibly causing the distortion. The sump is clean with a light amount of sand on bottom.
PTX06-1211	10/4/2021	(1) Well video	265.90	284				Well acceptance video. Well has 4" pvc casing and screen in good condition. The sump is clean with a light amount of sand on bottom. The water is slightly cloudy.

PTX06-1074	2/5/2021	(1) Well video	429.70	625				Performed well inspection video focusing on 74' and 325' below top of casing. 4" stainless steel casing and screen. Observed the following: yellow staining at 55' with corrosion and pitting in the casing seam, 59' yellow staining with severe pitting in middle of the stain, there are several more spots with similar staining throughout the casing, 74'-75' no indication of compromised casing, 204.5' possible grout in casing joint. The leak in the casing joint at 324' has deteriorated significantly since the 2016 video was made. Extreme calcification buildup at joint and extends well below the casing joint. Calcification buildup below 400' but unable to determine the origin. Observed mud and sand packed in the screen above water. The screen is relatively clean below top of water. The water was cloudy. Sand and debris buildup has filled up the sump into the screen. No indication how far the buildup is in the screen. Several zip ties from the tubing bundle on top of sand buildup.
PTX06-PZ01	3/29/2021	(1) Other-explained below	260.30	276				Performed well inspection per well maintenance plan. This well has 2" pvc casing therefore no well video was performed for this inspection.
PTX06-EW-3	3/31/2021	(1) Extraction well service						Verified LOTO status of this well and placed LOTO locks on lock box. Conducted location checks. Rigged up and pulled 13 joints of 1 1/4" X 20' pvc tubing, 1 - 1 1/4" X 16' sub, 1 - 1 1/4" X 2 1/2' sub and submersible pump. Work is being performed per WMR and well maintenance plan. P&T techs assisting.

PTX06-EW-60	3/31/2021	(1) Extraction well service						Verified LOTO status of this well and placed LOTO locks on lock box.Conducted tailgate safety briefing and daily rig/location checks. Rigged up and pulled 13 joints of 1 1/4" X 20' pvc tubing, 1 1 1/4" X 7' sub and submersible pump. Work is being performed per WMR and well maintenance plan. P&T techs assisting.
PTX06-EW-3	4/5/2021	(1) Well video	272.40	284				Performed well video per WMP inspection schedule. This well has 6" stainless steel casing and screen. The casing and screen are in good condition, the screen is clean. The sump is clean with a light amount of sand on bottom.
PTX06-EW-60	4/5/2021	(1) Well video	274.70	293				Performed well video per WMP inspection schedule. This well has 6" pvc casing and stainless steel screen. The casing is in good condition. The screen has moderate to heavy iron bacteria and sand buildup. This well has no sump.
PTX06-1158	4/19/2021	(1) Well video		285				Performed well inspection video per WMP. Well has 4" pvc casing and screened section. The casing and screen are in good condition. The sump is clean. Observed approximately 4" of water in the sump.
PTX06-ISB411	4/19/2021	(1) Well video	280.70	290				Performed well video per WMR to inspect the plug installed in the sump. This well has 4" stainless steel casing and screened section. The casing and screen are in good condition. The plug is visible in bottom of the sump. There appears to be gaps between the plug and walls of the sump, however it is unknown what the bottom of the plug is.

Location	Work Date	Activity	Water Level Measurement (ft btoc)	Total Depth Measurement (ft btoc)	Tubing bundle length (ft)	Drop tube length (ft)	Intake Depth	Comments
PTX06-EW-60	4/21/2021	(1) Re-development						Conducted tailgate safety briefing and daily rig/location checks. Surged/brushed screened section then bailing brown colored water with moderate amounts of sand. Water cleaned up after bailing 60 gallons.

btoc – below top of casing

[1]Water level and total depth measurements are required only once during a well maintenance event, although daily measurements were collected during some maintenance activities. Total well depths are only required when all equipment is removed from the well.

[2]Pump intake depth measurements are necessary only when the depths are reset.

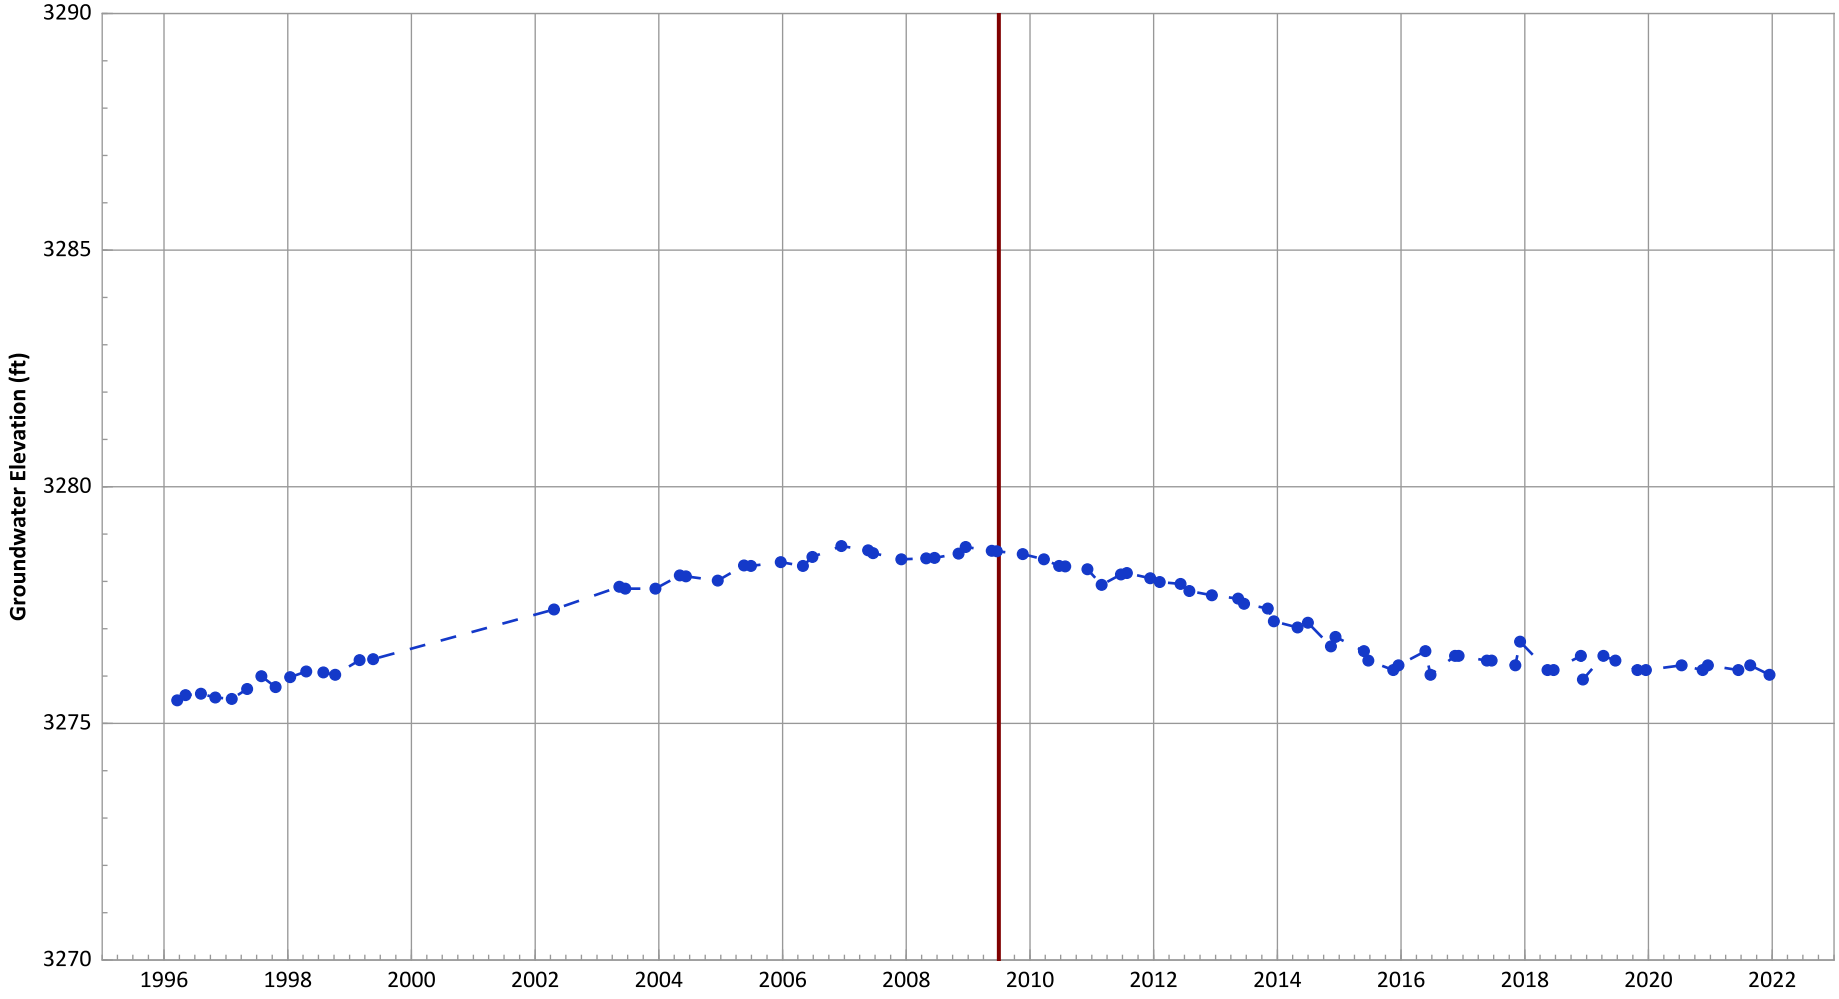
1114-MW4 Hydrograph in Perched Aquifer
USDOE/NNSA Pantex Plant

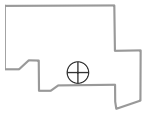


Notes:
1. Top of screen elevation is 3280.32 ft msl.
2. The bottom of screen elevation is 3260.32 ft msl.
3. A continous hydrograph was produced by linear interpolation between successive discrete measurements. Actual groundwater elevations between measurements may be different than shown.

Analysis Date: 02/02/2022

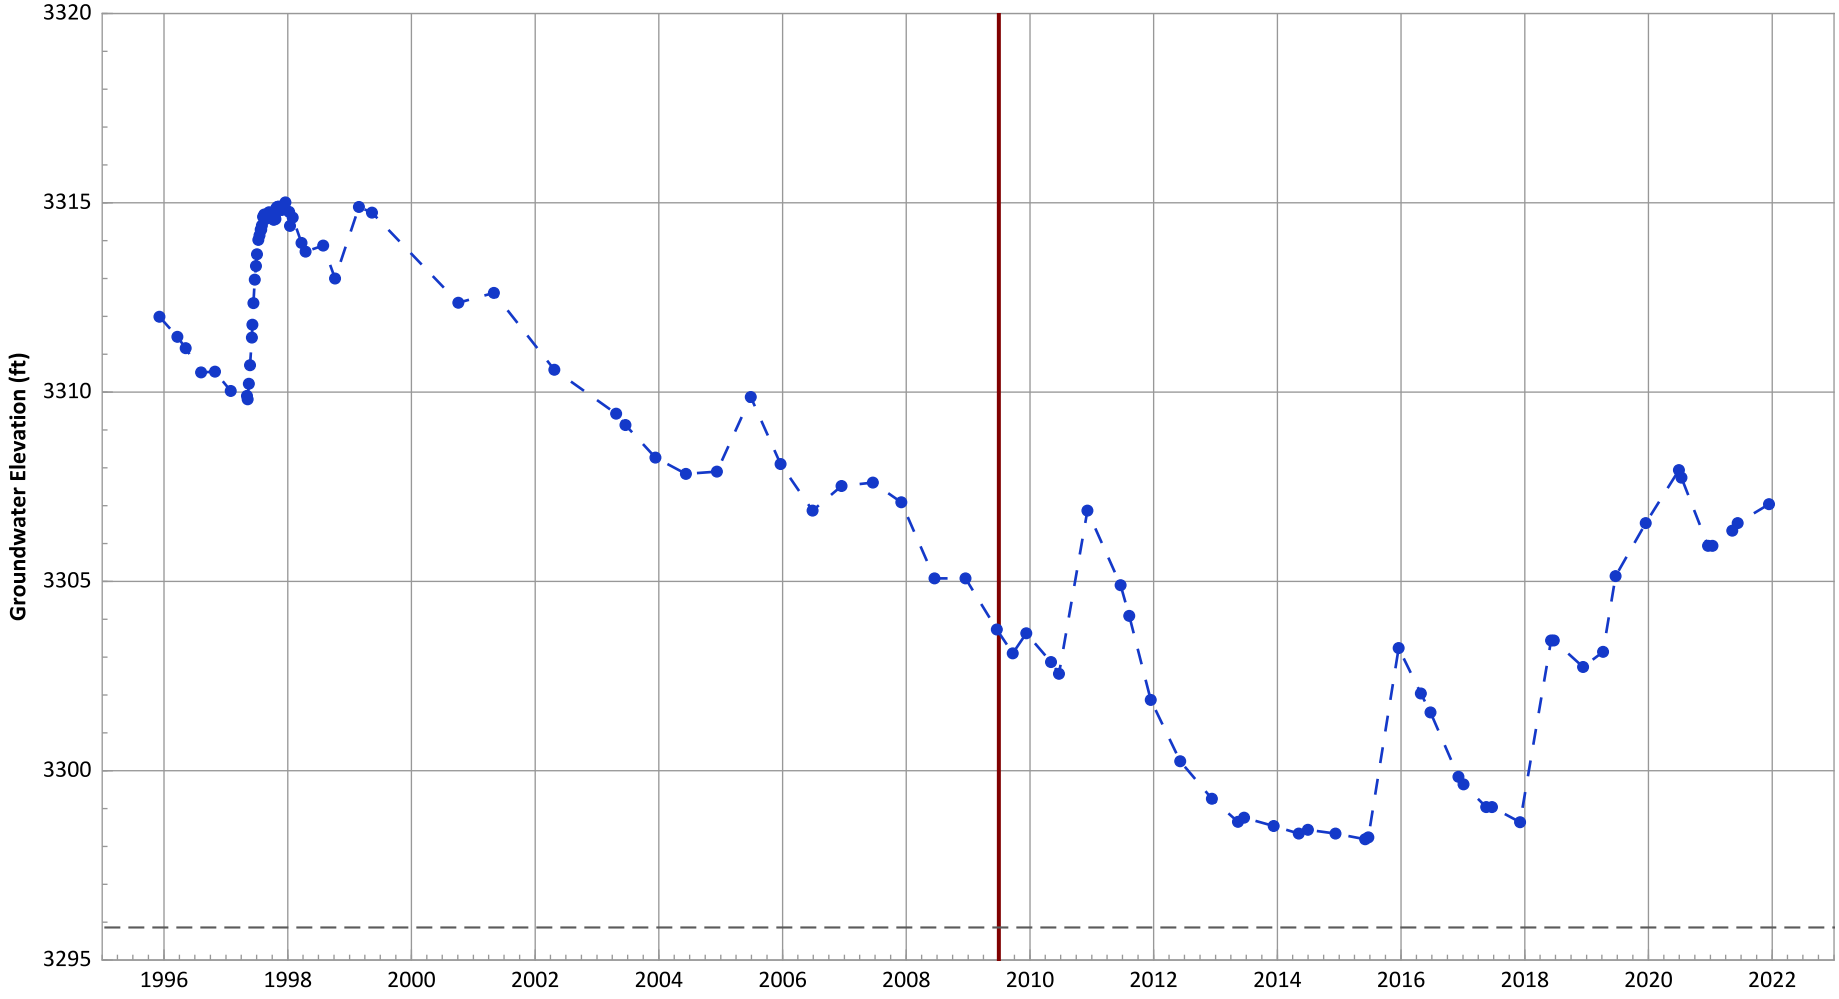
Groundwater Elevation
Start of Remedial Action

Well Location



Hydrograph Trend
(MAROS Linear Regression Method)
2020 - 2022 Data: No Trend
Data (7/2009 - 1/2022): Decreasing at 0.22 ft/yr

OW-WR-38 Hydrograph in Perched Aquifer
USDOE/NNSA Pantex Plant



Notes:
1. Top of screen elevation is 3310.86 ft msl.
2. The bottom of screen elevation is 3295.86 ft msl.
3. A continous hydrograph was produced by linear interpolation between successive discrete measurements. Actual groundwater elevations between measurements may be different than shown.

Analysis Date: 02/02/2022

Groundwater Elevation
Bottom of Screen Elevation

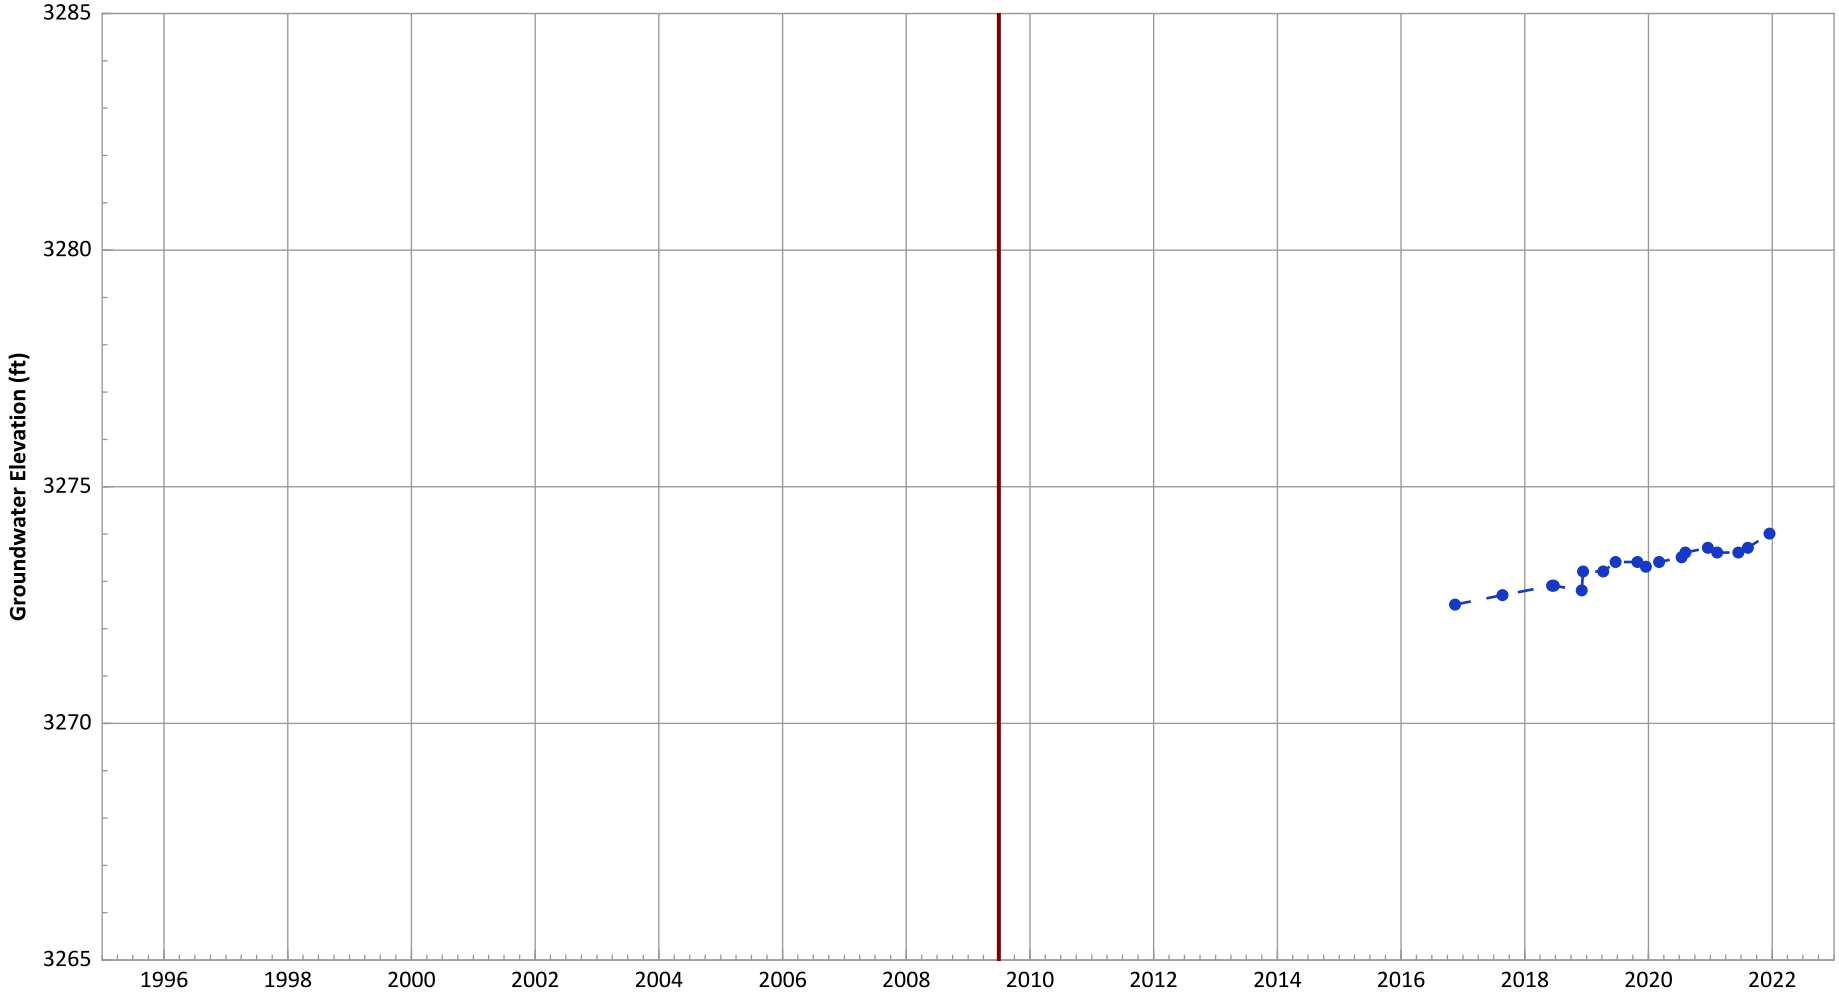
PTX06-1181 Hydrograph in Perched Aquifer
USDOE/NNSA Pantex Plant

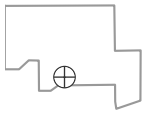


Notes:
1. Top of screen elevation is 3280.54 ft msl.
2. The bottom of screen elevation is 3250.54 ft msl.
3. A continous hydrograph was produced by linear interpolation between successive discrete measurements. Actual groundwater elevations between measurements may be different than shown.

Analysis Date: 02/02/2022

Groundwater Elevation
Start of Remedial Action

Well Location



Hydrograph Trend
(MAROS Linear Regression Method)
2020 - 2022 Data: Increasing at 0.25 ft/yr
Data (7/2009 - 1/2022): Increasing at 0.27 ft/yr

PTX06-1182 Hydrograph in Perched Aquifer
USDOE/NNSA Pantex Plant

Notes:
1. Top of screen elevation is 3243.3 ft msl.
2. The bottom of screen elevation is 3233.3 ft msl.
3. A continous hydrograph was produced by linear interpolation between successive discrete measurements. Actual groundwater elevations between measurements may be different than shown.

Analysis Date: 02/02/2022
